S.No: 2	Exp. Name: ***Word Count in a Text***	Date:2026-10-17

ID: 8115U25EC001

Aim:

Write a Java program that reads a line of text from the user and counts the number of words in it. A word is defined as any sequence of characters separated by one or more spaces.

Input Format:

- The first line consists of a print message: "Enter the text:".
- The second line consists of a string $text$, representing words separated by spaces.

Output Format:

- A single line containing a print message: "Number of words in the text:X" (where X is the count of words in the input string).

Sample Input and Output:

```
Enter the text:
Hello world! This is a test.
Number of words in the text:6
```

Source Code:

WordCount.java

```
import java.util.Scanner;

public class WordCount {

        public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        System.out.println("Enter the text:");
        String line = scanner.nextLine().trim();

        int count;
        if (line.isEmpty()) {
            count = 0;
        } else {
            // Split by one or more whitespace characters
            String[] words = line.split("\\s+");
            count = words.length;
        }

        System.out.println("Number of words in the text:" + count);

        scanner.close();
        }

}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter the text:
The sun and the moon
Number of words in the text:5

Test Case - 2
User Output
Enter the text:
Learning by doing
Number of words in the text:3
