S.No: 3	Exp. Name: ***Palindrome or Not***	Date:2026-10-17

ID: 8115U25EC001

Aim:

Write a program to check whether a given string is a palindrome or not. The string contains only lowercase letters.

Input Format:

- A single string is given as input, which needs to be checked for palindrome.

Output Format:

- Print "yes" if the given string is a palindrome.
- Print "no" if the given string is not a palindrome.

Note:

- The program should print the result (yes or no) followed by a new line.
- This question does not have partial weightages for test cases. All the test cases must be passed.

Source Code:

q18070/Main.java

```
package q18070;
import java.util.*;

class Main{
    public static void main(String[] args){
        Scanner scanner = new Scanner(System.in);
        if (scanner.hasNext()) {
            String str = scanner.next().trim();

            boolean isPalindrome = true;
            int left = 0;
            int right = str.length() - 1;

            while (left < right) {
                if (str.charAt(left) != str.charAt(right)) {
                    isPalindrome = false;
                    break;
                }
                left++;
                right--;
            }

            if (isPalindrome) {
                System.out.println("yes");
            } else {
                System.out.println("no");
            }
        }
        scanner.close();// Write your code here...
```

```
        }

}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
madam
yes

Test Case - 2
User Output
sky
no
